

NIVEAU B1/B2

You have read the following post on a blog about a smart home on the TechHive.com

By Christopher Null TechHive | JUL 12, 2021
4:00 AM PDT

One way to build out a smart home is to buy lots of components—sensors, smart bulbs, security cameras, speakers, and whatnot—and connect them all to a hub that helps them communicate with each other and with you, via your smartphone. But let's be real: That can involve spending a lot of money and investing a lot of time. And for some people, it's just overkill, but you will never regret the investment in a smart home.

You have decided to comment on this blog post. In your comment you should:

- describe what a smart home is
- discuss the benefits and drawbacks of living in a smart home
- explain what would make you invest money in a smart home

Write around 250 words.

Introduction

I have never cared about smart homes but your latest blog post has made me think about the subject and I decided to share my thoughts.

the blog post

I can see from your post that you are a big fan of smart homes. These are houses in which technological devices and systems are interconnected and controlled with one click on your smartphone. You are right in saying that building a smart home requires a big investment of time and money, but I can only partly agree with you that this investment will pay off.

Main part

your
opinion

There are many benefits of living in a smart home. They not only ensure security but also the comfort and well-being of its residents. For example, a house equipped with security cameras, motion sensors, smart bulbs and smart lights gives full protection and a nice friendly ambience. It is especially good for elderly or disabled people who can easily control their house and have easy access to all the devices. But also for an average person, a smart home with its modern remote-controlled speakers and lights creates a relaxing and friendly atmosphere. On the other hand, if everything in the house is powered by one smartphone, there is a danger that your phone may be hacked or lost, and then you lose control of your house.

Smart homes are expensive, however, they are also energy-efficient and in the long run, may help you save a lot of money. Not only this. They are eco-friendly which saves our environment. This fact would convince me to invest my money in a smartphone.

Conclusion

Well, that's my view. I am looking forward to more comments and your new posts in the future.
